## 10<sup>th</sup> Maths - Chapter 3

This is Problem-3.5 from Exercise 3.2

1. On comparing the ratios  $\frac{a_1}{a_2}, \frac{b_1}{b_2}$  and  $\frac{c_1}{c_2}$ , find out whether the following pairs of linear equations are consistent, or inconsistent

$$\frac{4}{3}x + 2y = 8 \quad (1)$$

$$2x + 3y = 12 \quad (2)$$

**Solution:**

This can also be written as:

$$\begin{pmatrix} \frac{4}{3} & 2 \\ 2 & 3 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} 8 \\ 12 \end{pmatrix} \quad (3)$$

$$x = \frac{\begin{vmatrix} \mathbf{b} & \mathbf{a}_2 \end{vmatrix}}{\begin{vmatrix} \mathbf{a}_1 & \mathbf{a}_2 \end{vmatrix}} = \frac{\begin{vmatrix} 8 & 12 \\ 2 & 3 \end{vmatrix}}{\begin{vmatrix} \frac{4}{3} & 2 \\ 2 & 3 \end{vmatrix}} = \frac{(8)(3) - (2)(12)}{(\frac{4}{3})(3) - (2)(2)} = \frac{24 - 24}{4 - 4} = 0 \quad (4)$$

$$y = \frac{\begin{vmatrix} \mathbf{a}_1 & \mathbf{b} \end{vmatrix}}{\begin{vmatrix} \mathbf{a}_1 & \mathbf{a}_2 \end{vmatrix}} = \frac{\begin{vmatrix} \frac{4}{3} & 2 \\ 8 & 12 \end{vmatrix}}{\begin{vmatrix} \frac{4}{3} & 2 \\ 2 & 3 \end{vmatrix}} = \frac{(\frac{4}{3})(12) - (8)(2)}{(\frac{4}{3})(3) - (2)(2)} = \frac{16 - 16}{4 - 4} = 0 \quad (5)$$

Therefore the equation is consistent as  $\frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$
